

src/exception/WindowNotCreated
Exception.cpp

```
graph TD; A["src/exception/WindowNotCreatedException.cpp"] --> B["WindowNotCreatedException.hpp"]; B --> C["exception"]; B --> D["string"];
```

The diagram illustrates the relationship between a C++ source file and its header file, and the dependencies of the header file. At the top is a grey box containing the source file path `src/exception/WindowNotCreatedException.cpp`. A blue arrow points down from this box to a white box containing the header file `WindowNotCreatedException.hpp`. From the bottom of the header file box, two blue arrows branch out to two separate white boxes: `exception` on the left and `string` on the right.

WindowNotCreatedException.hpp

exception

string
